Hi Tyler,

Attached is a before and after template py and insert sql scripts you sent me and how they've been adapted to the hyve kitchen schema. I strongly recommend using a diff tool to help visually see the differences between the two. The biggest difference includes table names, face hash value included, and the templating system in use.

Files included:

- docker-compose.yml - Docker file for local odoo deployment and testing
- docker-compose.yml - Docker file for local postgres with pgvector support to run numbered sql scripts against
- 00#_*.sql (1-4) - Sequential SQL files needed to re-create the full hyve kitchen module
- SAMPLE-TO-LANDED-DELTA.md - If you're interested, I used Claude to help document how the samples provided by you to have changed and how the overall system works
- odoo_create_lead_insert.ORIGINAL.sql - Original proposed SQL schema sent to me
- odoo_create_lead_insert.NEW.sql - Finalized SQL schema for this project
- [template_script_generate_sample_recipe_odoo_create_lead.ORIGINAL.py](#) - Original proposed python template
- [template_script_generate_sample_recipe_odoo_create_lead.NEW.py](#) - Finalized python template for this project

Next 5 most important items:

- Done: Change create lead to include faceid hash value
- Get lead based on faceid hash, email address, and/or phone number values
- Get / Set lead to get lead object if exists and if not exist create lead and return created object
- Get warehouse inventory totals
- Create calendar event

Odoo Status and Credentials:

- None, there are some port issues on the dev server I am still working out. I will let you know them tomorrow

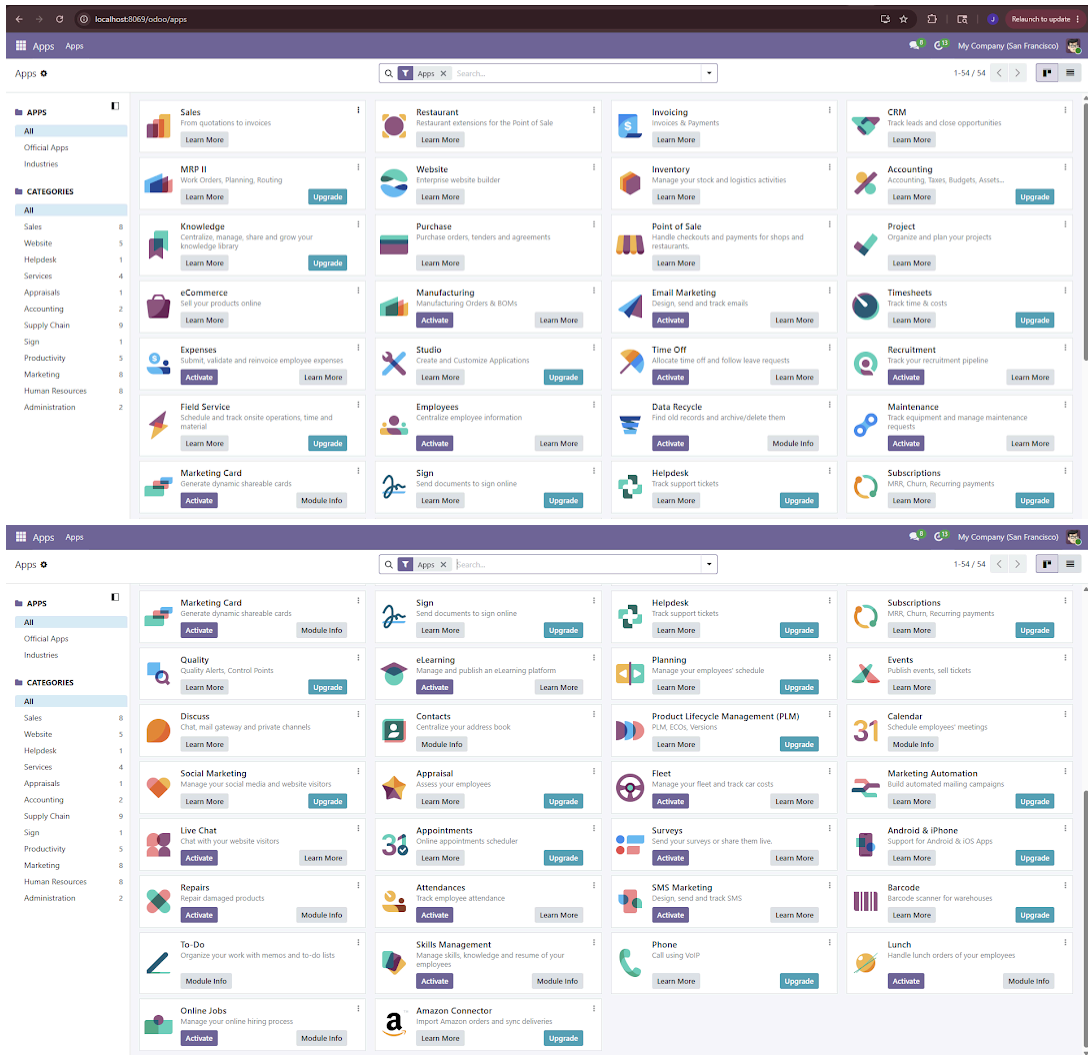

Loaded Odoo Modules:

- I have attached screenshots of the activated apps at <http://localhost:8069/odoo/apps>
- I will get you a list of module priorities later. In rough order of priority, focus on CRM, Sales, Invoicing, Inventory, Calendar, Events, Helpdesk, Project, Timesheets, Point of Sale, To-Do, eCommerce
- We need CRUD operations for all modules plus Get/Set operations where they make sense. Aggregation and filtering would be great but I want to run those through an LLM to see if it can help parse and generate correlations first.

Let me know if you have any questions.

Thanks!

Jason

Hi Jason,

I took your updates and got started on creating and testing the next scripts. I've completed and attached two so far:

odoo_get_lead_insert.sql

One thing worth flagging: the python_body includes graceful fallback handling for x_hyve_face_hash. On my Odoo instance, the custom field doesn't exist yet. The script now tries with the field, catches that specific error, and retries without it. It should work on any Odoo instance and automatically return the field if it's created. No code change needed on your end when the field goes live.

Test

Validates

- T1 Missing-input guard fires correctly
- T2 A clearly fake email returns SUCCESS + found=False
- T3 A real email from your Odoo finds the lead
- T4 Phone-only search works
- T5 OR domain with 2 conditions works
- T6 limit=1 is respected
- T7 Bad password returns AUTH_FAILED

odoo_getset_lead_insert.sql

Test

Validates

- T1 No lookup fields → MISSING_INPUT before any network call
- T2 Unknown email, no lead_name → MISSING_INPUT on the create guard
- T3 Known email → action=found, real lead_id, full lead dict
- T4 Unknown email + lead_name → action=created, new lead_id
- T5 Same email as T4 immediately after → action=found (idempotency)
- T6 Phone-only lookup → action=found
- T7 Bad password with valid lookup field → AUTH_FAILED

No problem on the dev server port issues, just let me know when it's ready to go, then I can test against it instead.

As we share more and more files, would you like to use a shared folder or repo so we can always see the latest and greatest from both ends?

Thanks!

Tyler

Hi Jason,
Quick update. I've made the two other high priority scripts, tested, and produced the sql inserts. See attached.

I also had Claude make a script test log that shows progress and details of what tests each has gone through. For completeness, I also ran our lead creation script through a similar battery of tests as well.

I'll plan to continue creating the other module scripts in the priority you listed unless I hear otherwise.

Thanks!
Tyler

Hi Jason,
Another round of scripts is complete. Here's what's attached:

- odoo_update_lead_insert.sql
- odoo_delete_lead_insert.sql
- odoo_create_order_insert.sql
- odoo_confirm_order_insert.sql
- odoo_get_order_insert.sql
- updated script_test_log.md

Please let me know if any of the previous deliverables need adjustments and if we need to alter course. Otherwise, I can keep plugging away at the queue below to maintain our schedule. When I get to the TBDs, I can ask Claude to cover our CRUD ops bases.

Priority	Module	Remaining
1	CRM	COMPLETE
2	Sales	COMPLETE
3	Invoicing	`odoo_create_invoice`, `odoo_get_invoice`
4	Inventory	`odoo_create_transfer`, `odoo_get_transfers`
5	Calendar	`odoo_get_events`
6	Events	`odoo_create_event_registration`, `odoo_get_registrations`
7	Helpdesk	`odoo_create_ticket`, `odoo_get_tickets`

8	Project	`odoo\_create\_task`, `odoo\_get\_tasks`
9	Timesheets	TBD
10	Point of Sale	TBD
11	To-Do	TBD
12	eCommerce	TBD

Thanks!

Tyler

Hi Jason,

I wanted to flag a gap I just caught. The Sales module I sent in batch 3 only included odoo_create_order, odoo_confirm_order, and odoo_get_order. I realized I missed odoo_update_order (write on draft orders) and odoo_cancel_order (action_cancel + optional hard delete). I'll have those to you with the next batch. I'll also make sure the remaining modules are more CRUD'y as well.

Tyler

Hi Tyler,

Sorry about the late reply. The attached scripts look great for now. I'm begining integration and we should be able to do realtime testing sometime tomorrow through realtime chat interfaces and then verbal ones. Keep on working on the recipes and I'll let you know what changes (if any are needed) once we begin end to end testing soon.

I've created and add you to the <https://github.com/invizarts/hyve-kitchen-recipes/> repo and added your initial scripts to it. Please upload all scripts to it!

Thanks

Jason

Hi Jason,
No worries. Congrats on the newborn!!

I've got 17 scripts done, tested, and loaded into github (Sales and Invoicing now complete). Alongside each, I have an associated TestLog file that comes with a degree of documentation. In the odoo folder, I also uploaded a script_test_log.md that gives a status report of where things are at. From the updated estimate, 49 odoo scripts remain.

Scripts Planned (49 remaining)

Module	Scripts	Count
Inventory	odoo_create_transfer, odoo_get_transfers, odoo_update_transfer, odoo_validate_transfer, odoo_cancel_transfer	5
Calendar	odoo_get_calendar_events, odoo_update_calendar_event, odoo_delete_calendar_event	3
Events	odoo_create_event_record, odoo_get_event_records, odoo_update_event_record, odoo_delete_event_record, odoo_create_event_registration, odoo_get_registrations, odoo_update_registration, odoo_cancel_registration	8
Helpdesk	odoo_create_ticket, odoo_get_tickets, odoo_update_ticket, odoo_close_ticket, odoo_delete_ticket	5
Project	odoo_create_project, odoo_get_projects, odoo_update_project, odoo_delete_project, odoo_create_task, odoo_get_tasks, odoo_update_task, odoo_delete_task	8
Timesheets	odoo_create_timesheet_entry, odoo_get_timesheet_entries, odoo_update_timesheet_entry, odoo_delete_timesheet_entry	4
Point of Sale	odoo_create_pos_order, odoo_get_pos_orders, odoo_get_pos_session, odoo_close_pos_session, odoo_cancel_pos_order	5
To-Do	odoo_create_todo, odoo_get_todos, odoo_update_todo, odoo_delete_todo	4
eCommerce	odoo_create_product, odoo_get_products, odoo_update_product, odoo_delete_product, odoo_publish_product, odoo_get_ecommerce_orders	6

Thanks,
Tyler

Thank you! Let's touch base tomorrow when you're free (in the evening). I'm glad we got a lot of them but surprised there's so few. I thought the models had more complex breakdowns.

After you're finished with the current selection, we'll need to brainstorm a bit. I want to focus on expanding on the advanced searching & filtering capabilities, internal systems analysis, and cross side functional data queries for visualization and possibly add a few new modules too.

Thanks a bunch!

Jason

Hi Jason,

Sounds good. Let's plan to talk tonight around 7 or 8 HST. I can text you when I free up.

This morning, I worked with Claude to produce a starting point on the brainstorming for expanding scripts into concierge aimed functionality. (Attached)

Also, on the Calendar vs Events items, I had a couple of notes for you:

- 1) I've renamed the calendar event creation recipe from `odoo_create_event` to `odoo_create_calendar_event` for consistency with the other three calendar scripts (get, update, delete). The logic is identical; only the recipe name changes. If you've already loaded `odoo_create_event_insert.sql`, please use the updated `odoo_create_calendar_event_insert.sql` from github going forward and discard the old file (currently still in github with `.OLD.` added in the name). The new SQL has a `WHERE NOT EXISTS` guard so it's safe to run even if the old recipe is still in the DB. It will simply create the new name alongside it.
- 2) The Event scripts are up next and I wanted to clarify whether you want CRUD on `event.event`, or only registration operations.

Thanks,

Tyler

Hi Jason,

Claude and I came up with v2 of the brainstorm document. I think it captures what you were describing pretty well. It also tried to divide the workload up between you, me, and Allan.

Ac couple of questions surfaced for you:

1. Do the CDM field names match what you were intending?
2. The `normalize_customer_360` script (single call that assembles profile + transactions + loyalty + tickets) — should that be a Tier 3.5 recipe, or should the kitchen engine handle that composition automatically?

Let me know what you think.

Tyler

Hi Tyler and Allen,

Attached is an updated version of the hyve phase 2 brainstorming document with how the changes have been incorporated and information about what needs to be done. Since Tyler will be unavailable later this week, Allen will move forward with the normalization tier 3.5 items. Attached is also an authoring walkthrough on how everything fully relates.

Thanks!

Jason
